Ortovia Android External Fixator

ORTOVIA Android Lengthening System designed to be used in lengthening and shortening purpose of the limb as a rigid and precision mechatronic external lengthening system. Ortovia App. is a special android-based software that authorize orthopedic surgeon to program and operate the system with remote access via internet.

This software will be installed on patients and surgeons mobile phone. With his mobile phone or PC, the surgeon can reach the relevant patient information, like lengthening and obtain information about the current situation. Finally, the surgeon is able to observe and reprogram the lengthening or shortening process of the Ortovia Android External Fixator.

Indications:

- Lengthening and shortening process in long bones

Contraindications:

- In case the patient does not have enough psychological and intellectual abilities to sustain the operation and postoperative treatment .
- Other known contraindications of limb lengthening process.

AcondaModular

- Smallcut Plate
- Normalcut Plate

Aconda is an anatomic and dynamic plate for fixation of proximal femur having five modules to fix proximal femur. The system has normalcut and smallcut models having locking and dynamic models. The material is MRI friendly stainless steel.

Indications

- Fractures of proximal femur
- Combined fractures of the proximal femur and ipsilateral shaft fractures
- Metastatic fracture of the proximal femur
- Osteotomies of the proximal femur
- Osteopenic bone
- Nonunions or malunions

Contraindications:

- Infection of surgical region
- Severe osteoporosis and avascular necrosis
- Metal sensitivity
- Metastatic or malignant diseases of the surgical area
- Psychological conditions that the patient can not tolerate the postoperative care

- Smallcut Locking Plate
- Smallcut Dynamic Plate

Aconda Pediatric Hip Plate System fixes proximal femur in children sizes. The system has smallcut locking and dynamic models. Both titanium and stainless steel made models are available

Features:

- Modularity
- Minimally invasive
- Trochanter major fixation
- Adjustable plate angle
- Radial fit
- Unique plate tip
- Low contact surface
- Conical and low profile
- Dynamic and locking options
- Cannulated lag screw options
- Unique Screws with unique tip.

Indications:

- Indicated for fixation of proximal femur in children:
- Fractures of the trochanteric region:
 - Osteotomies of the proximal femur
 - Metastatic fracture of the proximal femur
 - Osteopenic bone
 - Nonunions or malunions

Contraindicated:

- Infection of surgical region
- Severe osteoporosis and avascular necrosis
- Psychological conditions that the patient can not tolerate the postoperative regulation
- Metastatic or malignant diseases of the surgical area

Anatomic Bone Plates

The system is advised in reconstructive procedures for treatment of:

- Closed fractures
- Periarticular fractures
- Osteotomy fixation

Features And Benefit

- MRI compatibility
- Anatomic fit

Contraindications

- Infection
- Severe osteoporotic bone
- Metal sensitivity
- Psychiatric conditions that patient can not cooperate.

Anatomical Plate System NatilusSmallcut

Natilus Smallcut Plate Syste

- Smallcut Locking Plate
- Smallcut Dynamic Plate

Natilus Smallcut plate system is a minimal invasive system. Additionally Natilus Smallcut Plate System is more stable than traditional plate systems. In traditional plate systems the loading is perpendicular to the screws, but in Natilus Smallcut System the loading is less then 90 degrees. That means less bending force at screws and the plate. So early load bearing is available in Natilus Small-cut Plate system

Features

- Small incision is needed for application
- More stable than traditional plates
- MRI compatibility
- Less bending force on the plate
- Canals in the ends for skin retractor
- Radial anatomic fit
- Site canal - low contact surface combination
- Site canals for multipurpose use
- Unique plate tips for easy application
- Dynamic compression ability
- Locking screw application in locking plates
- Dynamic loading in dynamic plates
- Unique screw tip for self drilling and tapping
- Percutaneous screw application

Indications

Stabilization of long bones; Femur, tibia, humerus, radius, ulna...

Contraindications

- Infection
- Severe osteoporotic bone
- Metal sensitivity
- Psychiatric conditions that patient can not cooperate.

Aconda Modular

Aconda DC Screw

- 1. Cannulated
- 2. Percutaneous

Features:

Available as cannulated or percutaneous solid screws.
Designed to stabilize large bone fragments.
Threaded sleeve helps interfragmentary compression
Threaded sleeve strengthens the screw stabilization
Dynamic compression of the fragments
Stabilization of dynamic compression
Headless design minimizes soft tissue irritation
Self drilling and tapping ability
Material: Titanium alloy, stainless steel.

Indications

- Alignment and stabilization of large bone fragments
- Stabilization of periarticular fractures of large joints
- Nonunions or malunions of large bone fragments
- Arthrodesis of large joints; foot, knee, ankle, elbow

Contraindications:

- Small bone fragmens
- Active infection in surgical area
- Systemic contraindications for the surgery
